

VERSA SURFACE MOUNTED PROFILE

The Versa, is a premium surface-mounted profile designed to transform the look of LED flexible strip installations.

Perfect for under-cabinet, in-cabinet, and other accent lighting applications, it features a push-fit plastic lens that diffuses individual diodes for a clean, even glow. The profile is also compatible with our new plug-in sensor module, offering effortless control through IR, PIR, or touch dimmer options.

A key innovation is the optional flexible lens, supplied in long coilable lengths. This overcomes the common issue of visible breaks when joining multiple short aluminium profiles, ensuring a continuous, uninterrupted line of light while simplifying shipping and handling.

BENEFITS

- Reduce shipping damage and handling issues
- Improves the appearance of LED strips
- Protects LED strips from water, steam, and dust
- Elevates a flexible strip to a premium appearance

TECHNICAL SPECIFICATION

Material	Profile: Aluminium
	Lens: Polycarbonate

KEY FEATURES

- Premium aluminium profile for surface-mounted installations
- Universal compatibility with our LED flexible strip lights
- Sensor-ready: supports IR, PIR, and touch dimmer modules (Limited to single colour strips)
- Flexible lens option for uninterrupted long-length installations
- Short aluminium sections for easy handling and reduced shipping risk
